4.D eFlow Workflow	8
4.E eFlow-creating SAP-Dокумент	8
4.F eFlow-creating E-Invoice	8

1. eFlow:

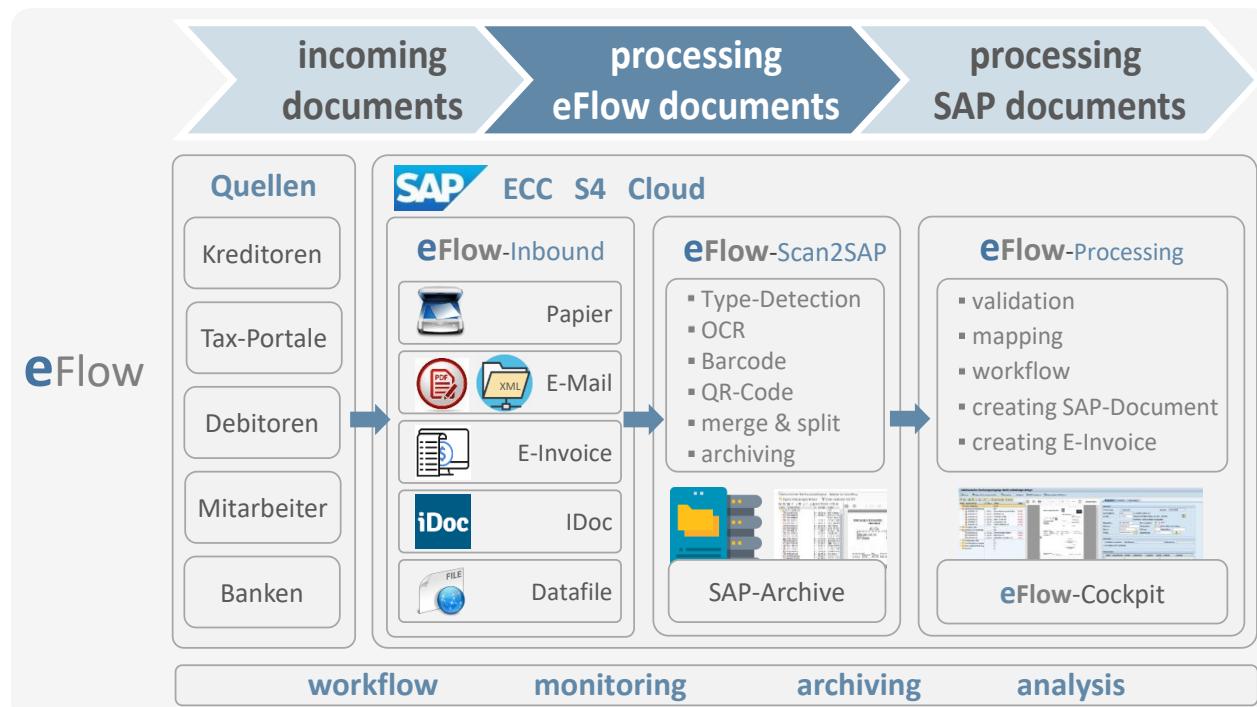

1.A Mainfunctions

- eFlow is used to automate and optimize business documents and business processes (accounts payable, expenses, accounts receivable, barcode documents, ...)
- eFlow includes all the necessary functions for inbound, scanning, archiving, workflow and processing.

1.B Unique selling points

- eFlow supports all business documents and business processes (not just vendors). This is the only way to achieve efficiency gains in all labor-intensive and/or frequent work steps and generate real cost savings.
- eFlow supports the scanning functions through the use of artificial intelligence and can thus achieve astonishingly good results in recognition and also in the automatic generation of the resulting SAP documents.
- eFlow is an SAP add-on developed in ABAP and therefore does not require any additional hardware investments.
- eFlow enables unrivaled cost-<->benefit ratio.

1.C Big-Picture

eFlow-Inbound	<ul style="list-style-type: none"> ■ is the central hub for incoming documents from all connected sources. ■ processes the different formats from all sources and makes all relevant data uniformly available for the subsequent eFlow-Scan2SAP.
eFlow-Scan2SAP	<ul style="list-style-type: none"> ■ is the central document capture for all incoming electronic documents from all connected sources. ■ processes the different formats from the eFlow inbound and makes all relevant data uniformly available for the subsequent eFlow processing.
eFlow-Processing	<ul style="list-style-type: none"> ■ is the central cockpit for all incoming electronic documents from all connected sources. ■ ensures the validation and mapping of the different document types. ■ creates the desired workflows for the business transactions. ■ Generates the relevant SAP documents (e.g. vendor invoice, e-invoice, ...)
Workflow	<ul style="list-style-type: none"> ■ Rule-based and context-dependent determination of the workflow steps and responsibilities ■ e-mail as trigger and workflow input for approve/reject by the responsibles
monitoring	<ul style="list-style-type: none"> ■ Request monitor as workflow inbox and monitoring
analysis	<ul style="list-style-type: none"> ■ In-place analyses (ALV-Grid) for all relevant data ■ InfoCockpit (MS-Excel) for various periodic and adhoc analyses

2. eFlow Inbound

eFlow Inbound:

- is the **central hub** for incoming electronic documents from all connected sources.
- processes the different formats from all sources and makes all relevant data uniformly available for the subsequent **eFlow-Scan2SAP**.

2.A Big-Picture

The following are used as inputs:

- SAP-Office-Inbound (via SAP-Connect)
 - Scanned paper documents
 - E-Mail (PDF, XML)
 - E-Invoice
- IDoc
- Datafiles

The typical document types are:

- Vendor Documents
- Expense Documents
- Customer Documents
- G/L Accounts Documents
- Barcode Documents
- IDoc's

2.B E-Invoice

E-invoices can also:

- Sent as XML via email from the vendor
- can be picked up via **the eFlow interface** from a vendor portal or from a tax authority portal

2.C Datafile

Typical uses include:

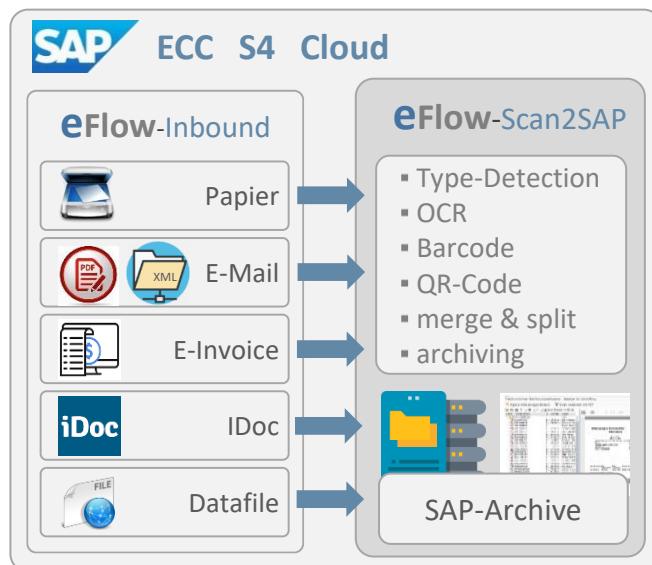

- Expenses
- Detailed Items for Vendor Invoices

3. eFlow-Scan2SAP

eFlow-Scan2SAP:

- is the **central document capture** for all incoming electronic documents from all connected sources.
- stores the documents in an audit-proof archive.
- processes the different formats from the **eFlow inbound** and makes all relevant data uniformly available for the subsequent **eFlow processing**.

3.A Big-Picture

The files generated by **eFlow-Scan2SAP** ("Scan2PDF" and PDF Extract) are:

- Readable PDF's
- Barcode information per page (XML)
- Text information per page (XML)

The outputs of **eFlow-Scan2SAP** are:

- All documents requiring retention and/or process-relevant documents in the archive system
- the business transaction with all its relevant metadata in **the eFlow cockpit**

The processing is carried out:

- Automated via SAP job processing
- adhoc in **eFlow inbound**

Capturing Features:

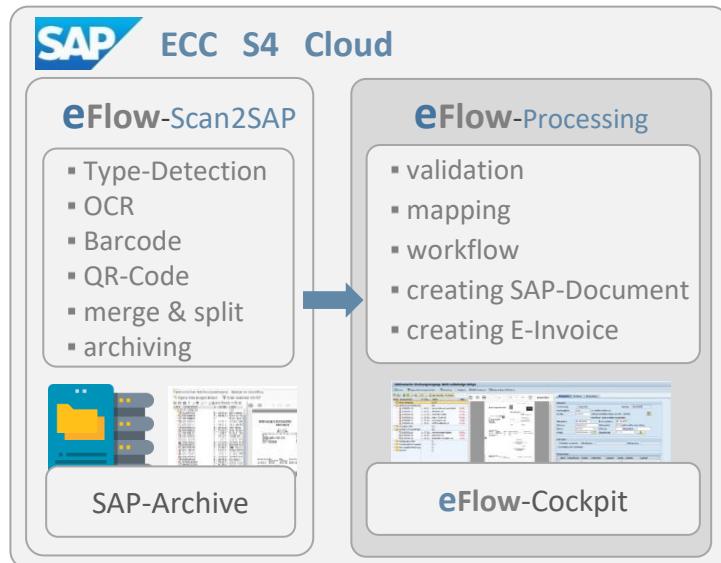

- Use of artificial intelligence to permanently improve detection
- Type-Detection (what type of document is involved)
- Barcode and QR code recognition
- Organizational assignment (e.g. which company code?)
- Automatic page separation and text recognition
- double-sided pages are detected, blank pages can be ignored, and landscape formats are rotated automatically

4. eFlow Processing

eFlow-Processing:

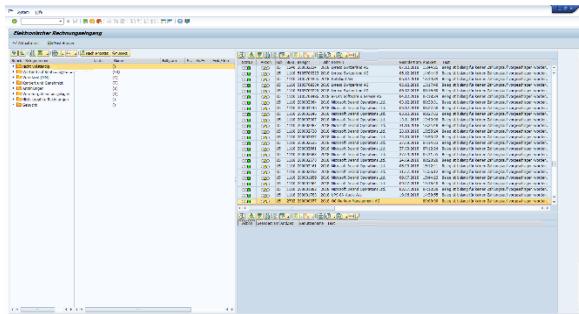

- is the **central cockpit** for all incoming electronic documents from all connected sources.
- ensures the validation and mapping of the different document types.
- creates the desired workflows for the business transactions.
- Generates the relevant SAP documents (e.g. vendor invoice, e-invoice, ...)

4.A Big-Picture

4.B eFlow Cockpit

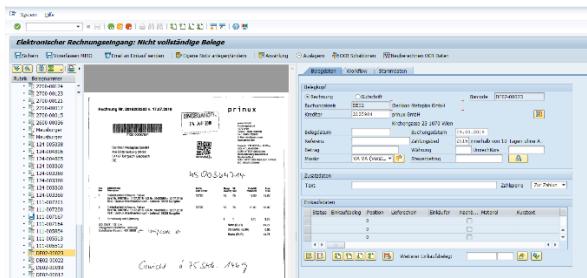

The various business transactions are managed in categories and categories.

4.C eFlow Validation & Mapping

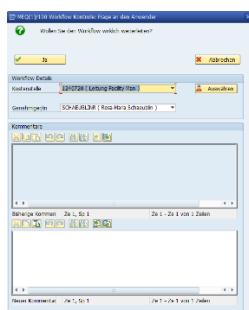

In many cases, validation of the metadata detected by capturing is necessary or even required.

eFlow-Cockpit offers a convenient user interface for this purpose.

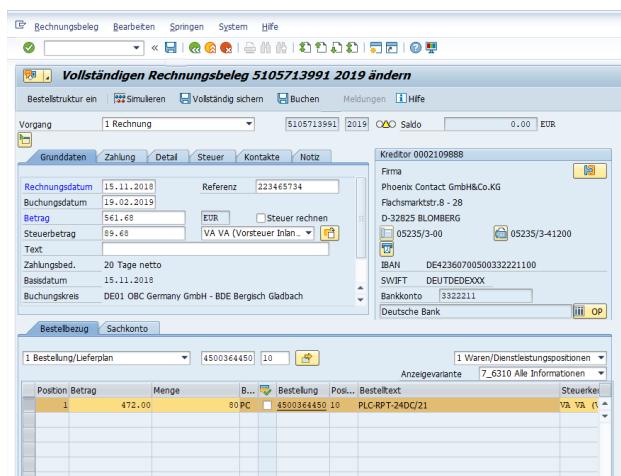

4.D eFlow Workflow

The workflows can be flexibly configured and assigned to the different document types depending on the context.

4.E eFlow-creating SAP-Document

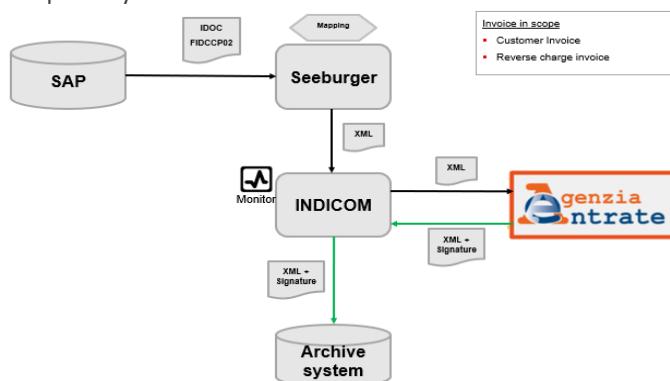

The SAP document is created from the metadata determined by document capturing. (e.g. via MIRO)

4.F eFlow-creating E-Invoice

For outgoing customer invoices, **eFlow-Processing** can create e-invoices and forward them to the recipient.
